

Claims:

What is claimed is:

1. A system for accessing Java Message Service using a mark-up language, comprising:
a source file that contains one or more markup language components;
a parser that parses said source file and communicates said markup language components to a command processor; and,
a command processor that converts the markup language components into one of JMS or JMX system operations.
2. The system of claim 1 wherein said parser and said command processor comprise an engine that parses source files and generates commands.
3. The system of claim 1 wherein the markup language is JMS markup language.
4. The system of claim 1 wherein the source file is an XML file.
5. The system of claim 4 wherein the markup language is JMS markup language.
6. A method for accessing Java Message Service using a mark-up language, comprising the steps of:
supplying a source file, wherein said source file contains one or more markup language components;
passing said source file as input to a parser, wherein said parser identifies said markup language components and passes said markup language components to a command processor; and,

translating, by said command processor, the markup language components into one of JMS or JMX system operations.

7. The method of claim 6 wherein said parser and said command processor comprise an engine that parses source files and generates commands.

8. The method of claim 6 wherein the markup language is JMS markup language.

9. The method of claim 6 wherein the source file is an XML file.

10. The method of claim 9 wherein the markup language is JMS markup language.
